LOCAL

REGIONAL

GLOBAL

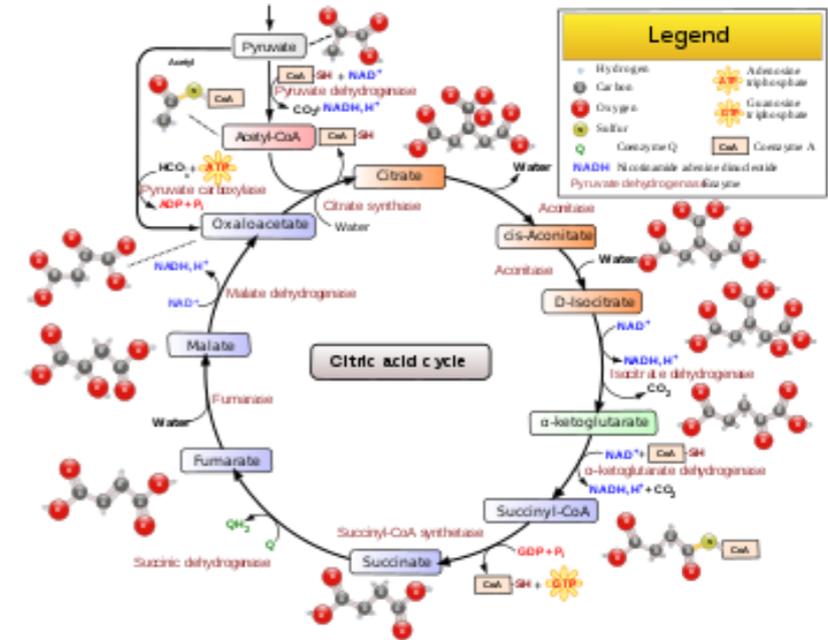

Wicked problems

- ▶ Inter-related issues cutting across institutional silos and multiple scales
- ▶ Multiple government agencies, businesses, non-governmental organisations, communities and individuals with 'stake'
- ▶ Multiple ways of framing the problem, different knowledge sets and competing values across economic, environmental, social and cultural criteria
- ▶ Conflict, power relations and vested interest
- ▶ Uncertainty about the possible effects of action

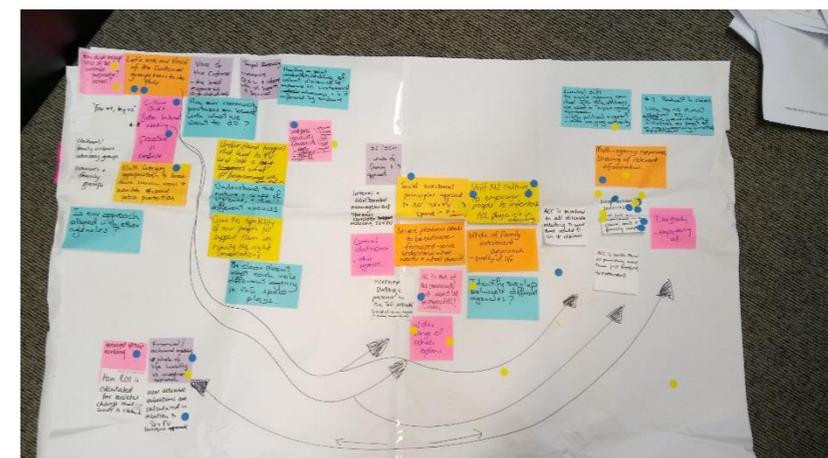

Thinking about systems (systems science)

OR

Using systems to think? (systems thinking)

https://en.wikipedia.org/wiki/Citric_acid_cycle

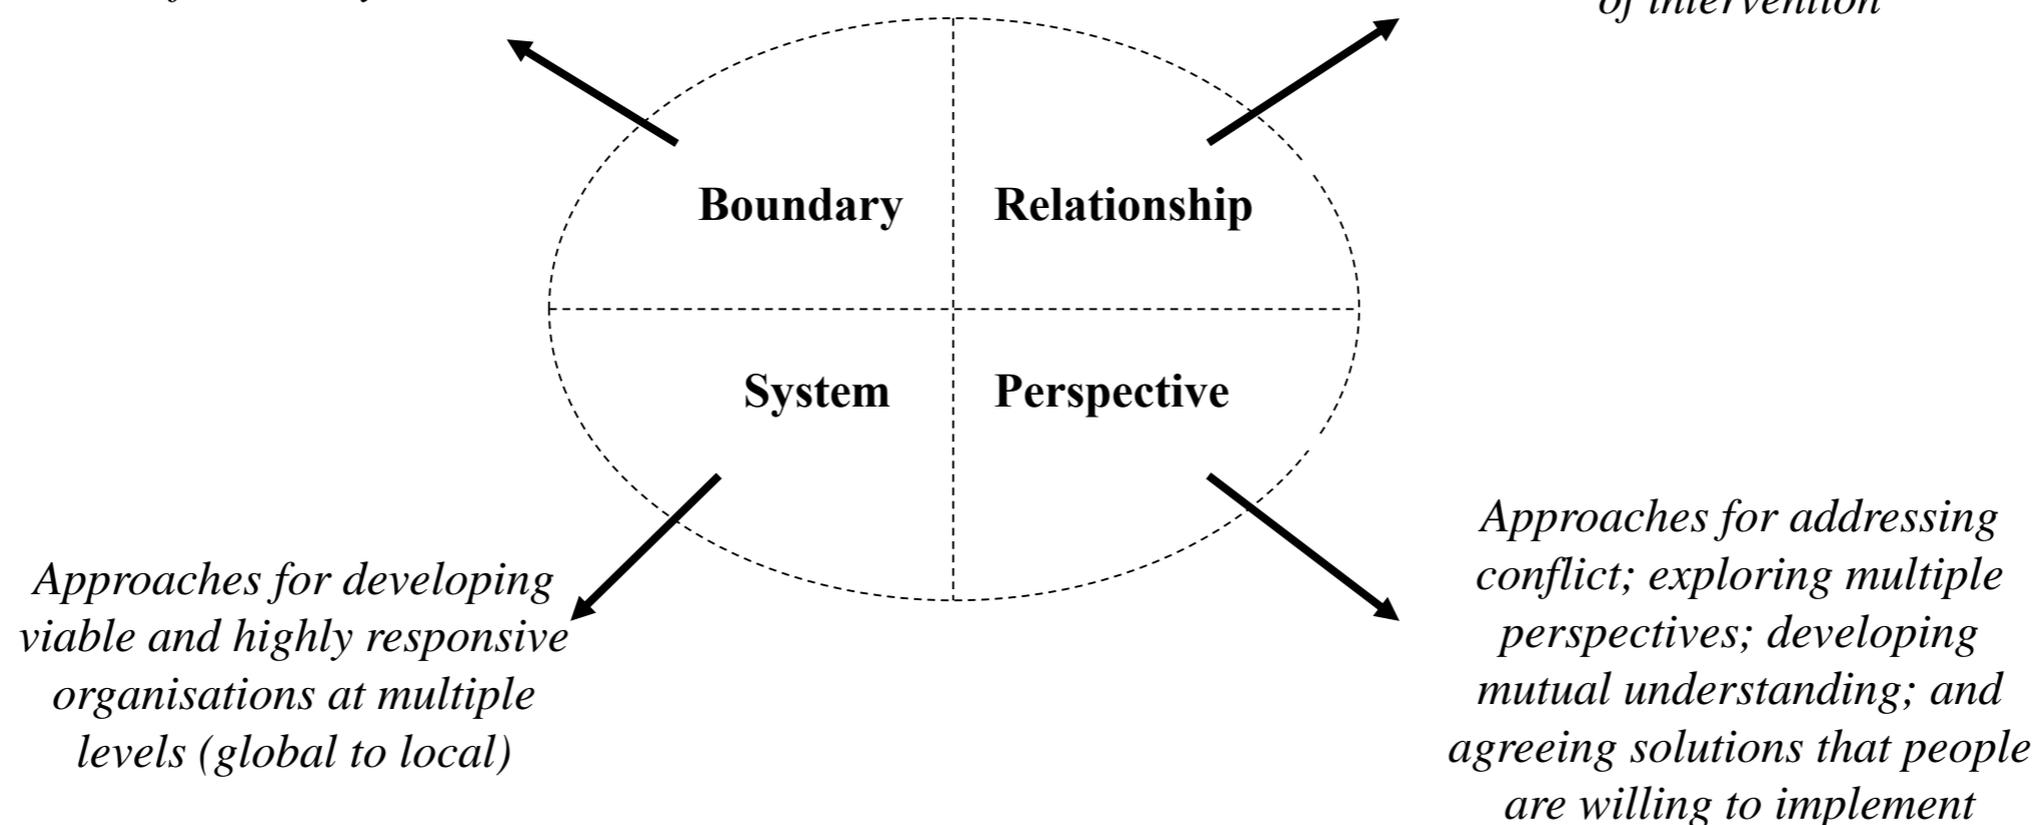

What is systems thinking?

Inter-relationships	<ul style="list-style-type: none">• What is the nature of the inter-relationships within a situation?• What are the patterns that emerge from those processes, with what consequences and for whom?
Boundaries	<ul style="list-style-type: none">• How is a situation being framed?• What is explained within the system and what is exogenous to the system?
Perspectives	<ul style="list-style-type: none">• What are the different ways in which this situation can be understood?• How are these different understandings going to affect the way in which people judge the success of an endeavour?

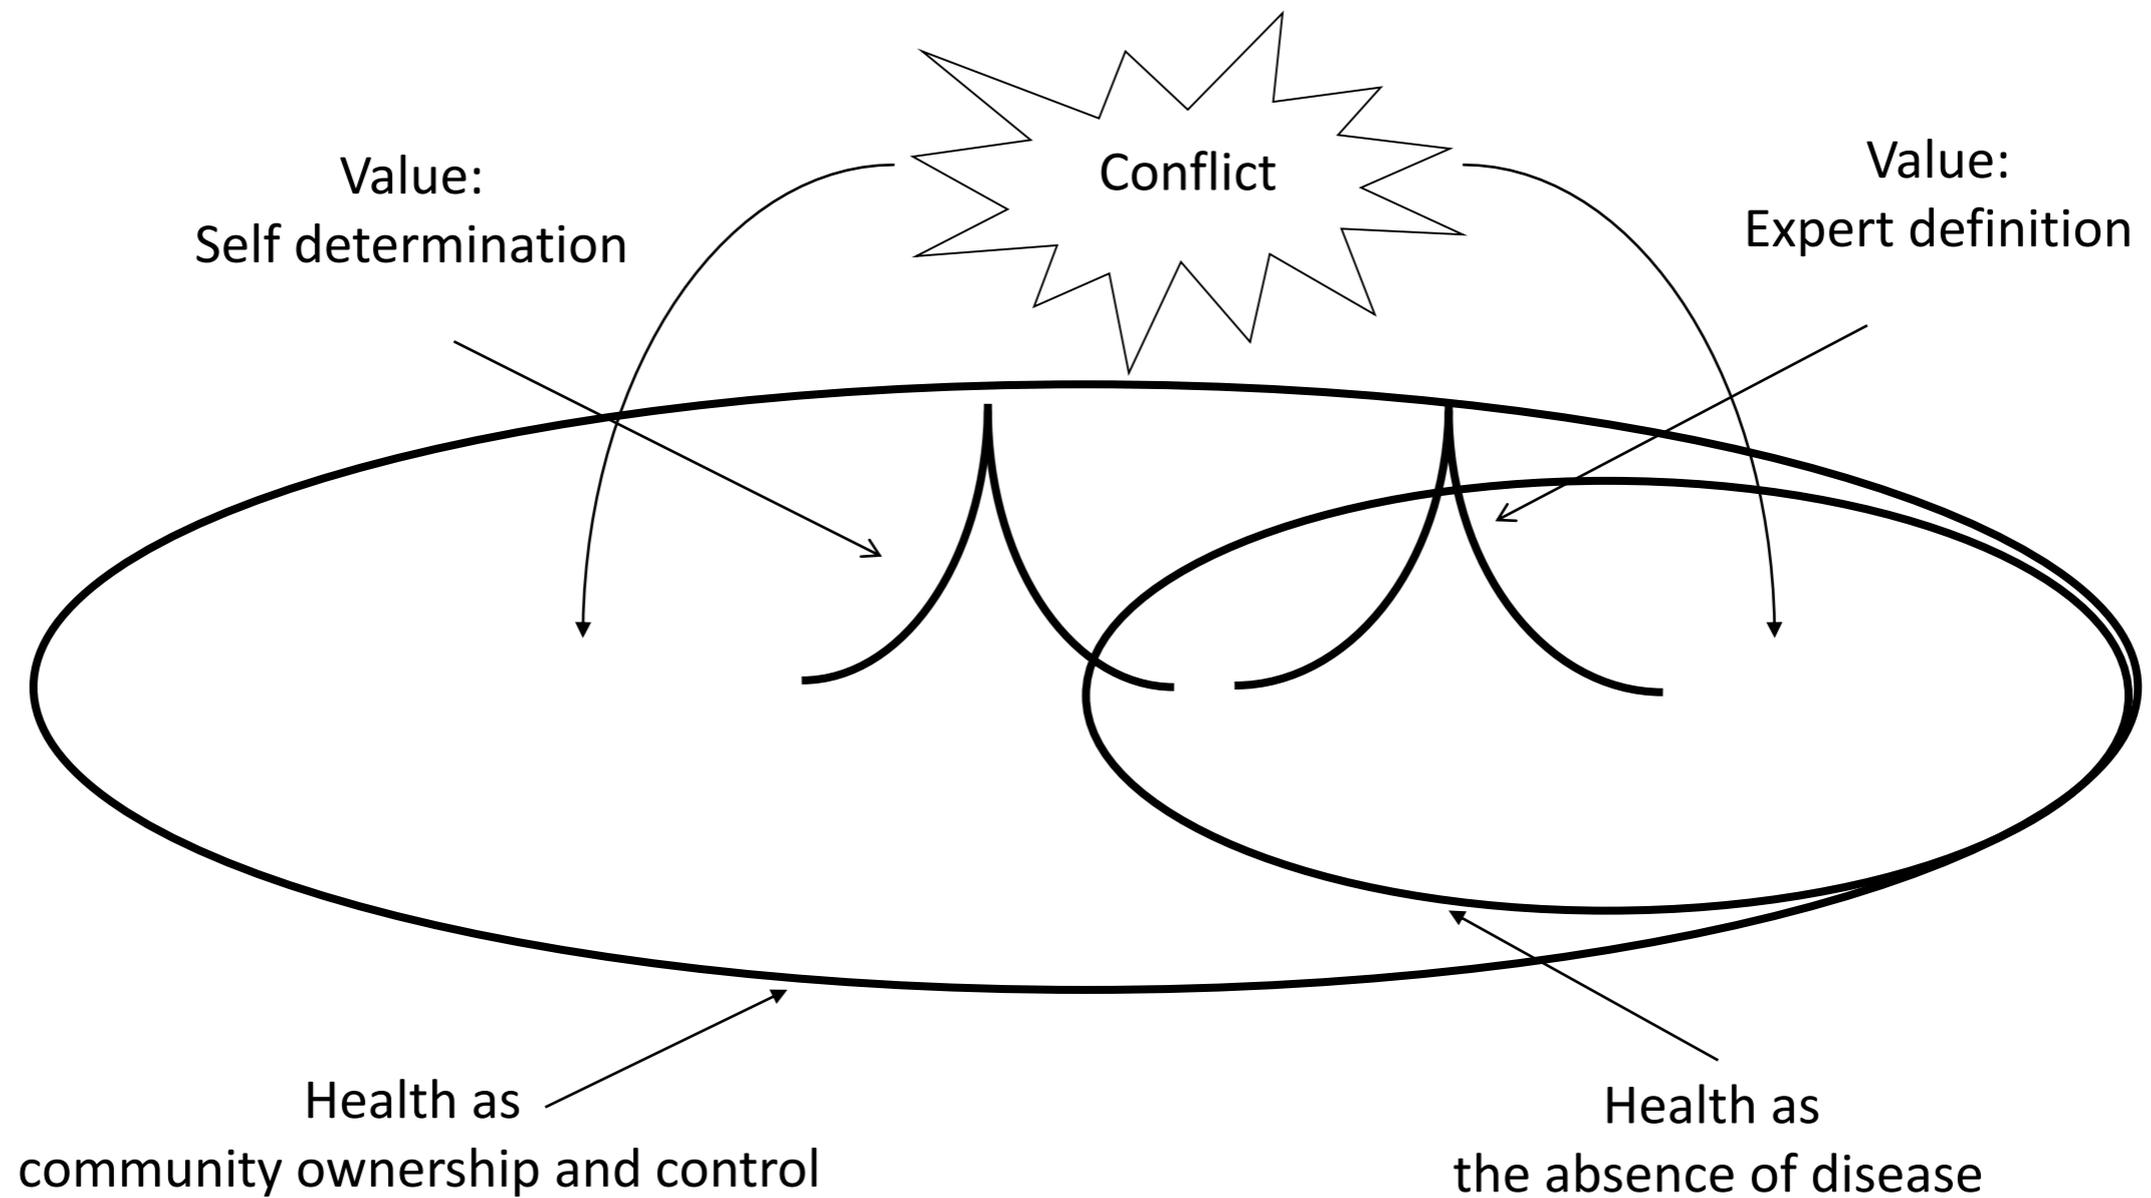

Systems approaches

Approaches for exploring value and boundary judgments about what should be included in or excluded from analysis

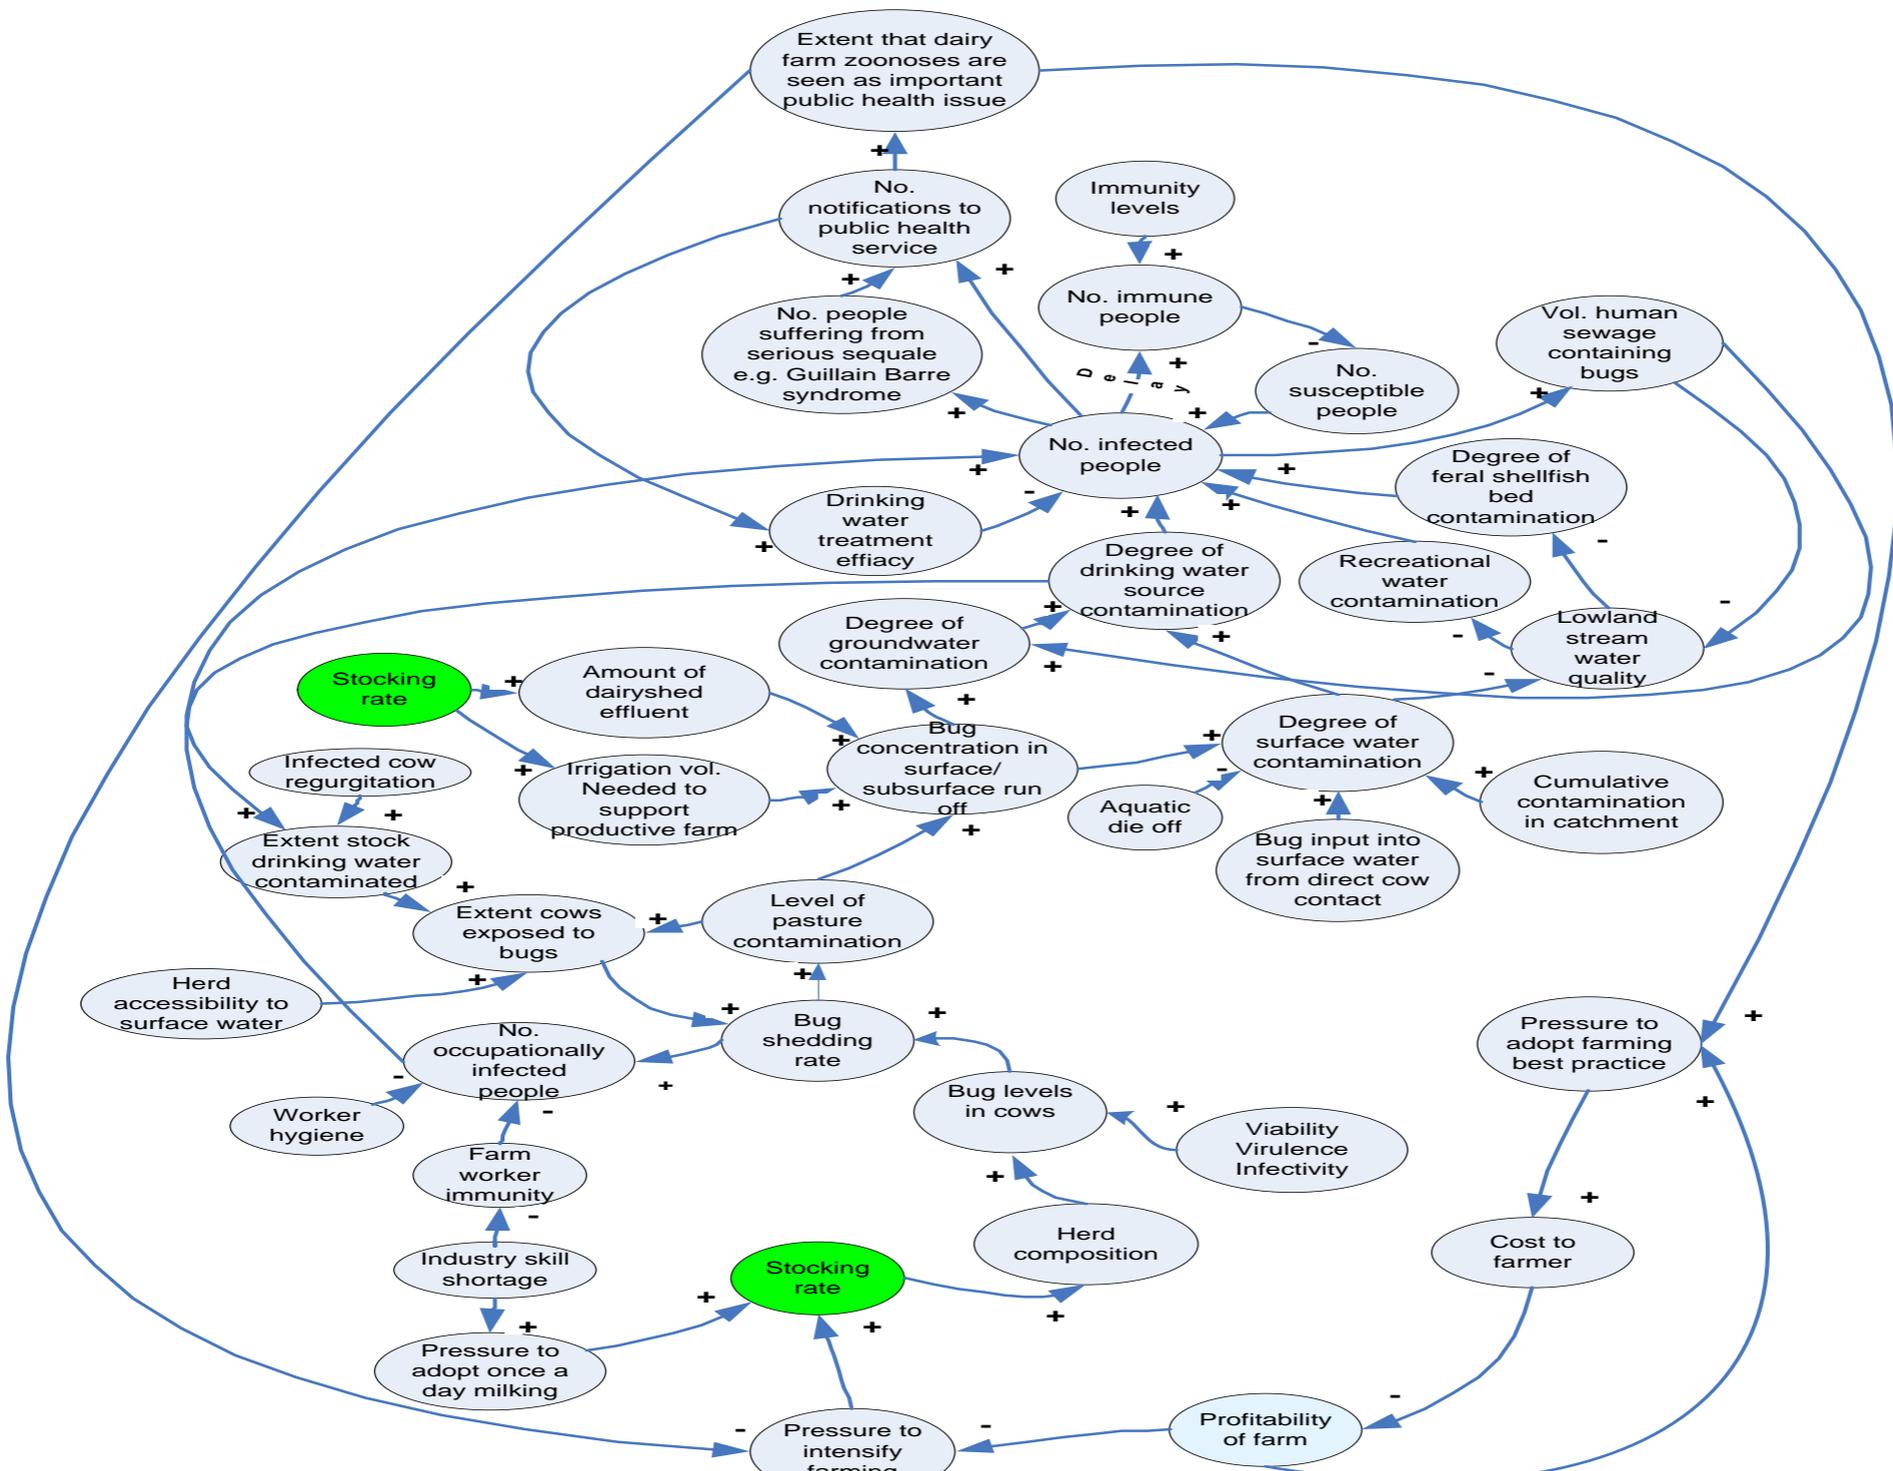

Approaches for understanding complex causality; feedback; vicious and virtuous circles; and the possible consequences of intervention

Dealing with boundaries

Understanding complex causality

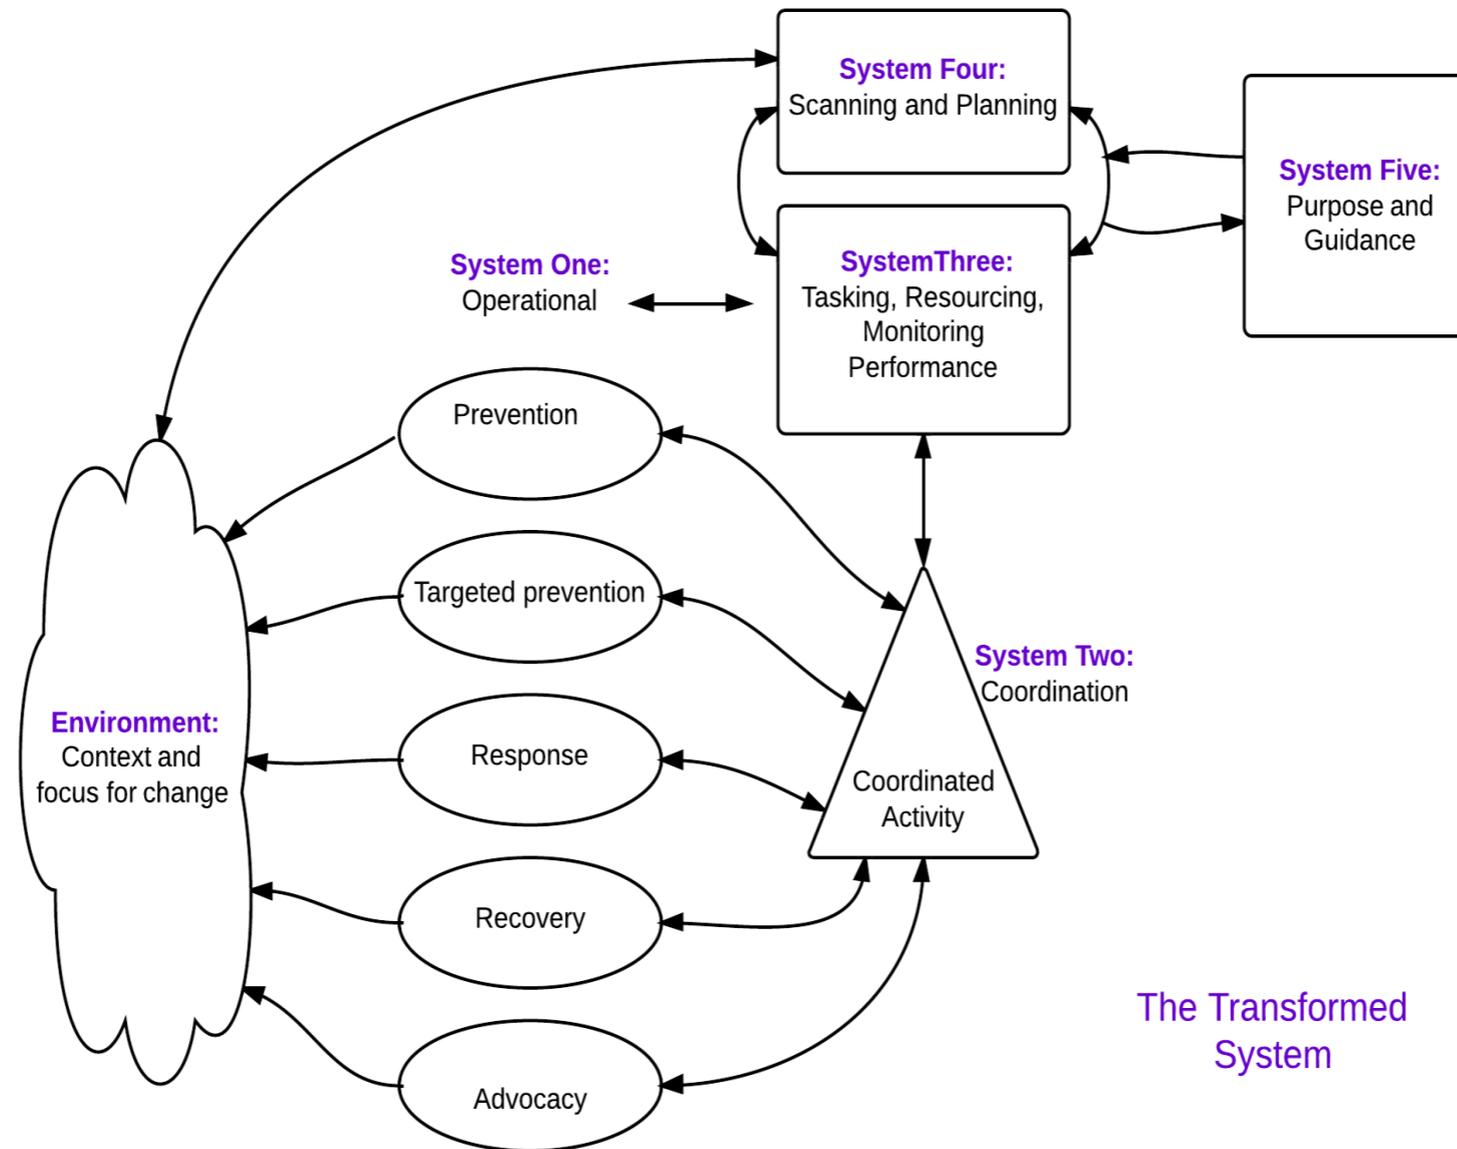

Regardless of whether the price inc. or dec. there is pressure to intensify production

Working with multiple perspectives

Designing viable organisations

Why is engagement important?

- ▶ Boundaries are inevitable
 - ▶ Comprehensive analysis is impossible
 - ▶ Value and boundary judgments are closed related
 - ▶ How far ought we push out boundaries?

- ▶ Elements of a systemic intervention (Midgley, 2000)
 - ▶ Explore stakeholder values and boundaries for analysis
 - ▶ Challenge marginalisation
 - ▶ Draw on a wide range of systems methodologies

An example

- ▶ Ministry of Health's Drinking Water Assistance Programme
 - ▶ Hokianga hapū participation
- ▶ Health
 - ▶ Absence of disease?
 - ▶ Community ownership and control?
- ▶ Outcome evaluation
 - ▶ Kaupapa Māori processes
 - ▶ Most significant change and participatory video
 - ▶ Action planning for drinking water supply sustainability
